

Conservation Strategies

Home Energy Saving Tips

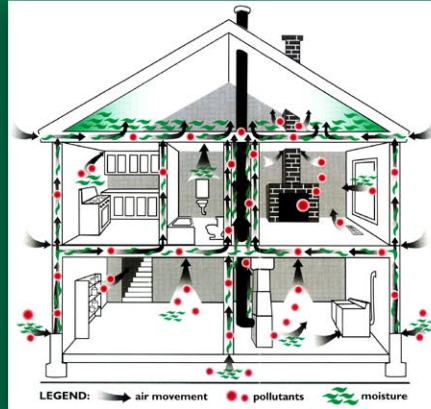

Weatherization Works!

Insulate your walls, ceilings and floors.

Caulk and weather-strip around doors and windows.

Install an insulating blanket on your water heater tank.

Wrap all hot water heater pipes.

Replace or clean heating and cooling filters regularly.

Have a qualified technician service your HVAC equipment.

Close off unused areas in you home.

Lower thermostat settings.

Install compact fluorescent bulbs.

Install low-flow shower heads and faucet aerators.

make homes more comfortable • improve indoor air quality
reduce moisture damage • lower utility bill • save energy
